

Remembering GraphQL

Monday, August 16, 2021 1:35 PM

```
query {  
  obj: {  
    prop 1,  
    prop 2,  
  }  
}
```

resolver: returns
an Object that
represents the query

I wonder if you can
defer resolution until the
property is called (probably)

Each p is also
an object (until
it's not)
